

SAGAR KUVAR

+91 9920393780 ◇ Navi Mumbai, Maharashtra
skuvar4@gmail.com ◇ [Linkedin](#) ◇ [Portfolio](#) ◇ [Github](#)

TECHNICAL SKILLS

Language	Python, Java, CSS3, JavaScript, PHP ,PowerShell, R
Framework	Django , Flask , Bootstrap , Angular
Database	MySQL , MSSQL , Amazon RDS , DynamoDB
CI/CD	Docker , Jenkins ,Ansible ,Gitlab ,Bitbucket
Other	Burpsuite , Nessus, OWASP ZAP , Alteryx, REST , System Audits , PowerBI , Fortify

EDUCATION

Masters of Technology in Computer Science , Indian Institute of Information Technology, Pune	2021 - 2023
Bachelor of Engineering in Computer Engineering , Pillai College of Engineering, New Panvel	2017 - 2021

EXPERIENCE

Deputy Manager Bombay Stock Exchange (BSECL)	Jan 2026 - Present <i>Mumbai, Maharashtra</i>
--	--

- Automated VAPT/WAPT dashboards for CISO/CEO visibility , triggered owner notifications for closure
- Performed SAST, DAST, VAPT, BAS, CART & Compliance Assessments with vendors
- Managed Tenable SC & Nessus Manager plugins, upgrades, and platform stability
- Conducted ad-hoc VAPT/WAPT and enforced vulnerability closure within TAT
- Led compliance-driven security assessments under SEBI mandated VAPT/WAPT, NCIIPC, and SEBI CSCRF
- Tracked and remediated vulnerabilities across endpoints, network, Windows & Linux within SLA

Consultant KPMG Global Services (KPMG Australia)	March 2025 - Jan 2026 <i>Mumbai, Maharashtra</i>
--	---

- Provided strategic data insights to stakeholders using Python, AI models, and internal KPMG tools.
- Automated data workflows and preprocessing using Python, Alteryx, and Databricks to improve efficiency and data quality.
- Designed and deployed interactive dashboards in Tableau and Power BI for executive reporting.
- Supported KPMG Australia by delivering analytics-driven business solutions across multiple domains.
- Conducted financial due diligence and delivered analytics-driven solutions for global clients, including KPMG Australia.

Associate PricewaterhouseCoopers Pvt Ltd. (PwC)	Sept 2023 - March 2025 <i>Gurgaon, Haryana</i>
---	---

- Identified and reported 50+ critical web and 10+ critical mobile vulnerabilities across client environments using tools like Burp Suite, Frida, and MobSF, significantly improving security posture.
- Designed and executed phishing campaigns targeting 200–250 users by deploying custom phishing pages; led post-incident cyber awareness sessions to reduce human risk factors.
- Automated vulnerability data analysis using Python and Power BI, enabling CISOs and CIOs to identify threat trends and take timely, informed decisions.
- Mentored junior security analysts, enhancing their proficiency in vulnerability assessment, secure coding reviews, and cybersecurity analytics through structured hands-on training.
- Performed Root Cause Analysis (RCA) for security incidents in high-risk environments, delivering actionable remediation strategies and improving incident response time.
- Developed custom security scripts using Python and PowerShell to automate vulnerability scanning, simulate phishing attacks, and analyze security logs for anomaly detection.
- Conducted SAST, DAST, and Nessus-based vulnerability assessments on web, API, and mobile applications across multiple clients to ensure compliance and reduce attack surface.

- Developed a Python-based RFB Checker using Flask and REST API, incorporating email notifications to enhance security team workflows.
- Developed a real-time employee tracking web application using Flask, React, and JavaScript, improving the security team's monitoring capabilities.
- Contributed to the development of a CV-Scraper ML model with 80% accuracy using Streamlit, AWS Comprehend, and Lambda, enhancing recruitment efficiency.
- Streamlined deployment processes by deploying containers on RedHat Servers using Jenkins and Ansible, reducing deployment time by 40
- Replaced legacy batch scripts with Python, boosting transaction performance by 90%.
- Enhanced Power-BI report accuracy for Real-Estate UK stakeholders by improving ETL processes, increasing data reliability by 50%.
- Collaborated with vendors including Accenture, Capgemini, LTI, and HCL to set up Autosys jobs, ensuring seamless job scheduling and execution.
- Developed a web application using HTML, CSS, JavaScript, and PowerShell to restart Pro-Watch and CCTV services, reducing downtime by 70%.
- Assisted the Global Real Estate Team in migrating from ProWatch 4.0 to 5.5 and conducted disaster recovery drills, ensuring system resilience and reliability.

CERTIFICATIONS

- [DSCI Certified AI Native Security Researcher](#)
- [Certified Ethical Hacker V12 Master](#)
- [ISC2 CC](#)
- [Microsoft Certified: Power BI Data Analyst Associate](#)
- [Microsoft Certified: Azure Fundamentals](#)
- [IBM Data Science Professional](#)
- [Alteryx Core](#)

PROJECTS

- **Anomaly Detection Using Deep Learning:** Built a model that finds different types of anomalies using the VGG-16 pre-trained model; collected a large dataset to train the model.
- **Travel Insurance claim prediction based on Financial History:** Built machine learning model to forecast whether a client would claim travel insurance, and developed a web application using Flask API for output.
- **Speech Reproduction using Lip Reading:** Developed a model that fixes bugged audio successfully by lip reading using TensorFlow, CUDA, and cuDNN.
- **Phishing Detection System using Machine Learning** Built a project that predicts if a given website is safe or phishing using machine learning algorithms with Python, TensorFlow, and Beautiful Soup.
- **College Indicator Android application:** Developed an application where users can view timetables, results, chat with others; teachers can change schedules and send notifications using Java, Firebase, and Android.

ACHIEVEMENTS

- **Hackathon:** Selected in Top 10 out of 55+ teams in Headout-sponsored hackathon - Prototype.
- **Competitive programming:** Active on various online coding platforms and passionate about solving challenging problems.
- **Extra-curricular:** Led university Table Tennis team and U-18 Inter School level Table Tennis player.
